EDUCATION

KIT-Kalaignar Karunanidhi Institute Of Technology , India2023 – 2027

B.E.CSE(Artificial Intelligence And Machine Learning) , Pre-Final yearCurrent CGPA: 7.96/10.0

Coursework: Computer Architecture, Computer Networks, Operating Systems, Database Management Systems

EXPERIENCE

Full Stack Training, Ipcs Global – Coimbatore, India (offline)July 2024

Completed hands-on training in HTML, CSS, Numpy and Pandas basics. gaining practical skills in full-stack web development.

Developed a webpage using HTML CSS And JS

Machine Learning Implant Training Ether solutions – Coimbatore, India (offline)Dec - Jan 2025

- Machine Learning with Data Science Training
- Overview Of ML And DS Concepts

Full Stack Intern Learnlogicify LLp-Coimbatore, India (offline).Dec - Jan 2025

- FullStack Development
- strengthen my skills in building dynamic and responsive web applications.
- Developen a Webpage using HTML,CSS,Bootstrap,JavaScriptReact

PROJECTS

LearnMate AgentMultilingual AI Lecture Assistant using Agentic AI

- Developed a multilingual AI-powered educational assistant using CrewAI, Groq LLM, and Whisper AI.
- Implemented speech-to-text lecture transcription, smart notes generation, and exam question generation with answers.
- Built an AI chatbot and personalized study planner with a modern web interface using Gradio and deployed on Hugging Face Spaces.

AI-Based Career Prediction System using Deep Neural Networks & Skill ProXiling

- Developed a Deep NeuralNetwork (DNN)model topredict 8different careerpaths simultaneously using multi-output architecture in TensorFlow/Keras.
- Implemented data preprocessing pipeline including label encoding, normalization, and multi-target handling using Pandas, NumPy, and Scikit-learn
- Created an interactive Gradio web interface for real-time career prediction, skill analysis, and personalized recommendations.
- Engineered a career recommendation engine that maps top user skills to relevant job roles (e.g., Doctor, Data Analyst, Architect)
- Packaged the project into a deployable web app, enabling students to explore suitable career paths using AI-driven suggestions

Smart Hydration Monitoring System Using IOT

- Developed an IoT-based hydration monitoring system using NodeMCU ESP8266, ultrasonic sensor, water sensor, and LED display to track real-time

Designed the system to detect empty water bottles using dual-sensor logic and trigger user alerts for timely reSilling.

- Programmed the microcontroller using Embedded C/C++ in Arduino IDE, ensuring accurate sensor readings and stable system performance.
- Designed the electronic circuit and integrated components for a low-cost, energy-efXicient prototype.

Music Genre Classification using Machine Learning

- Developed a full-stack ML system that predicts music genres from audio and video Siles using Support Vector Machine (SVM) and audio feature extraction with Librosa. Deployed the React frontend on Vercel and the Flask backend on Render using Docker for production-ready inference

TechnicalSkills	Certifications and Courses
Programming: Python JavaScript oops(Basics) SQL C C++	Coursera:a.What is Data Science,Generative AI with LLMs,Supervised MachAI for Everyone
Web Technology: HTML CSS React Node.js Rest API Gradio Integration	Amazon AWS:Cloud Foundation
Tools:Github,VS code,Jupyter ,CrewAI,GroqLLM,HuggingFace Spaces,Whisper AI	SkillUp :Machine Learning
	Crusa:Operating Systems and Systems Programming
	Cisco:python essentials,Introduction to modern AI

COMPETITIVE PROGRAMMING

]Leetcode : Max rating - 1462 | Solved problems: 100+ | Badges : 7 |Codechef : Max rating - 1683 | Position : 2 Star | Problems : 500+ | Contest participated in Global Platforms: 96| codeForce:Contest max rating: newbie, 110
