

Sample Data

Sample Request 1

Request ID: S001

User Input:

Setup a MERN stack development environment on Ubuntu 22.04 with MongoDB, Node.js, Express, React, and Redis.

Expected Output:

- Ubuntu installation script
- MongoDB installation
- Node.js setup
- Redis configuration
- Dependency report
- Security validation report

Generated Format:

Bash Script (.sh)

Sample Request 2

Request ID: S002

User Input:

Install Python Machine Learning environment with TensorFlow, PyTorch, Jupyter Notebook, and MLflow on macOS.

Expected Output:

- Python installation
- Virtual environment setup
- TensorFlow installation
- PyTorch installation
- Jupyter Notebook configuration
- MLflow setup

Generated Format:

Bash Script (.sh)

Sample Request 3

Request ID: S003

User Input:

Configure Docker, Kubernetes, Terraform, and Jenkins on Ubuntu Server.

Expected Output:

- Docker installation
- Kubernetes setup
- Terraform installation
- Jenkins configuration
- Security validation

Generated Format:

Bash Script (.sh)

Sample Request 4

Request ID: S004

User Input:

Setup Java Spring Boot development environment on Windows 11 with Maven, PostgreSQL, and IntelliJ IDEA.

Expected Output:

- Java JDK installation
- Maven setup
- PostgreSQL installation
- IntelliJ installation
- Environment variable configuration

Generated Format:

PowerShell Script (.ps1)

Sample Request 5

Request ID: S005

User Input:

Create a Docker Compose setup for a microservices application with API Gateway, PostgreSQL, Redis, and RabbitMQ.

Expected Output:

- Docker Compose file
- Service configuration
- Network configuration
- Volume configuration
- Documentation report

Generated Format:

Docker Compose (.yml)

Sample Request 6

Request ID: S006

User Input:

Install React Native development environment on macOS with Android Studio and Xcode.

Expected Output:

- Node.js installation
- React Native CLI setup
- Android Studio installation
- Xcode validation
- Emulator configuration

Generated Format:

Bash Script (.sh)

Sample Request 7

Request ID: S007

User Input:

Setup a complete Data Science environment on Ubuntu with Python, Pandas, NumPy, Scikit-Learn, JupyterLab, and PostgreSQL.

Expected Output:

- Python installation
- Data Science libraries installation
- JupyterLab configuration
- PostgreSQL setup
- Documentation report

Generated Format:

Bash Script (.sh)

Sample Request 8

Request ID: S008

User Input:

Install Docker Desktop and Git on Windows 11.

Expected Output:

- Docker Desktop installation
- Git installation
- PATH configuration
- Compatibility validation

Generated Format:

PowerShell Script (.ps1)

Sample Multi-Agent Execution**User Request**

"Setup MERN Stack on Ubuntu 22.04"

Agent 1 – Coordinator

Understands project requirements.

Agent 2 – Dependency Analysis

Identifies:

- Node.js
- MongoDB

- Redis
- NPM

Agent 3 – OS Detection

Detects Ubuntu 22.04.

Agent 4 – Security Validation

Checks for unsafe commands.

Agent 5 – Compatibility Validation

Verifies package versions.

Agent 6 – Script Generator

Creates executable Bash script.

Agent 7 – Report Generator

Creates installation documentation..
